Veterinarian/Hospital _____

Client/Patient _____

List of pre testing requirements:

LABS:

1) SUPERCHEM/CBC

2) URINALYSIS

- Ideally all labwork should be as current as possible in relation to the treatment date. We will accept any labs done within 3 months of the treatment date.
- If any of these labs have been done while on medication (Tapazole trial) please include those for review.

3) T4 LEVEL

- *NOTE- T4 LEVELS MUST BE AN EXACT RESULT- IF DONE IN HOUSE THERE MUST BE A SPECIFIC READING (i.e- >8 not acceptable).
- Any cat that has a serum T4 level in the gray zone (2.3-4.7 ug/dl) should have a FT4 submitted.
- Any cat that has been on thyroid medication for over a 6 month period of time would need to have a T4 level taken once the cat has been off medication for a week. This is to insure that the proper dose of I-131 is given in relation to the T4 level.

4) **RADIOGRAPHS:**

Chest and abdominal DV/Lateral views or whole body DV/Lat views

The labs can be faxed, e-mailed or mailed.

The radiographs can be e-mailed or mailed. We cannot review radiographs the day of the treatment.

FAX- 631-467-3946
