Veterinarian/Hospital \_\_\_\_\_

Client/Patient \_\_\_\_\_

List of pre testing requirements:

**LABS:**

1) **SUPERCHEM/CBC**

2) **URINALYSIS**

- Ideally all labwork should be as current as possible in relation to the treatment date. We will accept any labs done within 3 months of the treatment date.
- If any of these labs have been done while on medication or Y/D diet (Tapazole/or diet trial) please include those for review.

3) **T4 LEVEL**

- \*NOTE- T4 LEVELS MUST BE AN EXACT RESULT- IF DONE IN HOUSE THERE MUST BE A SPECIFIC READING (i.e- >8 not acceptable).
- Any cat that has a serum T4 level in the gray zone (2.3-4.7 ug/dl) should have a FT4 submitted.
- Any cat that has been on thyroid medication or Y/D diet for over a 6 month period of time would need to have a T4 level taken once the cat has been off medication or diet for a week. This is to insure that the proper dose of I-131 is given in relation to the T4 level.

4) **RADIOGRAPHS:**

Chest and abdominal DV/Lateral views or whole body DV/Lat views

---

**The labs can be faxed, e-mailed or mailed.**

**The radiographs can be e-mailed or mailed. We cannot review radiographs the day of the treatment.**
